Declarations

Availability of data and material

The proof half is the module `SIC_D12_WitnessVessel.lean` in the `p4ramill` library of `p4raker` (<https://github.com/umpolungfish/p4raker>). The runtime half is `src/witness_vessel.rs` in `m0MonadOS` (https://github.com/umpolungfish/momonad_os). Canonical tuples come from `IG_catalog.json`; the 88 dialects from `dialect_expansion.rs`. Frozen review snapshots: `p4raker` at commit `eea2c0c`, `m0MonadOS` at commit `17bce34`, each on branch `crystalline/manuscripts3-20` (tag `crystalline-manuscripts3-v1`). This manuscript trio is frozen in `ig-docs` (<https://github.com/umpolungfish/ig-docs>) on the same branch name and tag.

Competing interests

The author declares no competing interests.

Funding

This research received no external funding.

Authors' contributions

C. Lando Mills: conceptualization, formalization, software, investigation, validation, writing (original draft), writing (review and editing).

Acknowledgements

The author thanks Harry T. Larson for imparting the importance of catching rising problems and never letting them go. The lossy cargo reading of transport was such a problem: once the Grammar localized the malformation at the dimensionality–topology pair, the corrected protocol was pursued until the round-trip law held on both substrates.
